- Experienced with object-oriented programming.
- Implemented backend functionalities using PHP.
- Developed WordPress Plugins & Themes.
- Designed and developed responsive websites.
- Optimized website loading time performance by 3 times faster.

★

PROJECT

Auto Mechanic System

The main goal of our project was to automate the mechanic's manual System. There was a need for a centralized database to have mechanic's data. It also serves as a mechanics application that provides the features of vehicle wreck. The customer will find its problem easy and time-saving as compared to doing it manually. To help mechanics and repair vehicles with high-quality material needed and standards. Our main goal was to provide optimum solutions to solve the user facing issue and user's satisfaction. For requesting mechanic first select the appropriate problem that they are facing at that time and selects the desired mechanic after viewing the profiles and then proceed with the request.

- We developed an Android application that would provide the services of a mechanic for vehicles.
- The user will be able to book mechanic and get services on the spot.
- The user will save time as compared to doing it manually.
- The user will just book, wait and pay.

🎓 EDUCATION

Bachelor of Science in Software Engineering, University of Lahore

FSC Pre Engineering, Pakistan International School Jeddah

Matriculation , Pakistan International School Jeddah

✪ COURSES

Web Development , IT Hub

Android Development , Eco-soft Solutions

AWS Certified Solutions Architect , Google "On-going"

Freelancing , DigiSkills
